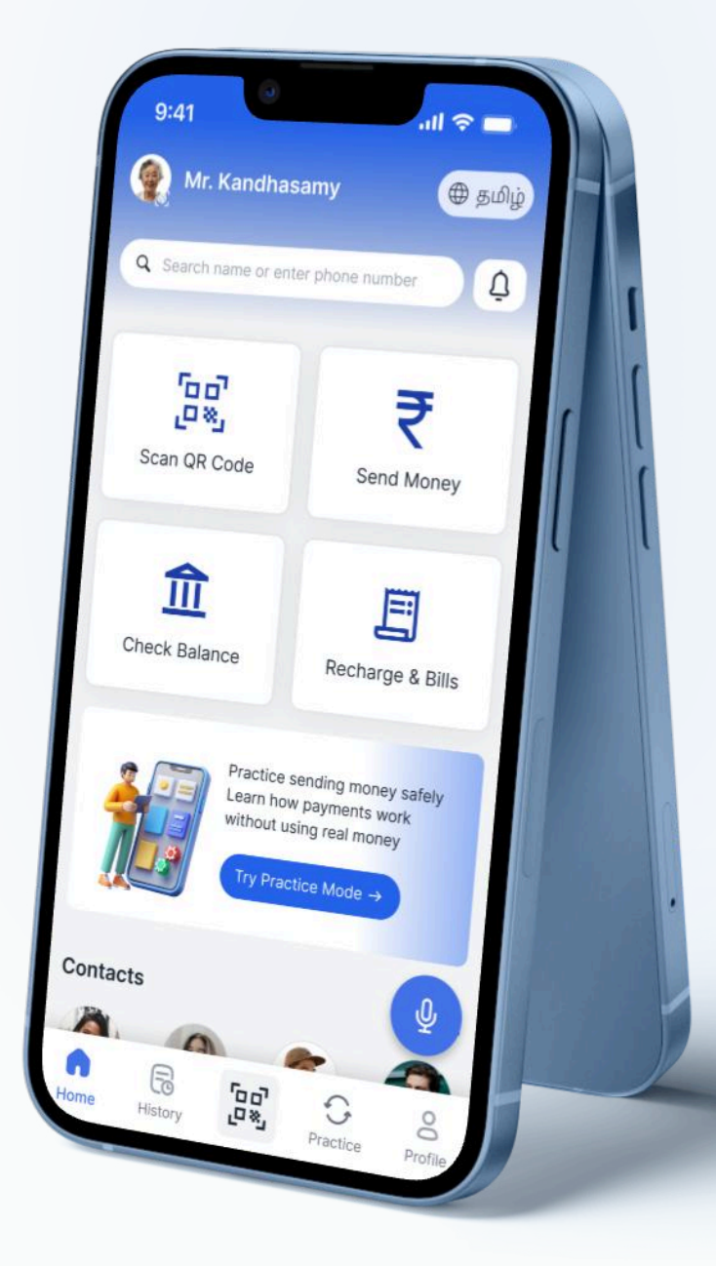
PayNora DESIGN SYSTEM V1.0 Hackathon 7.0

PAYNORA
Visual Design Documentary

Designing trust, confidence, and safe digital payments for senior citizens.

Making high-risk digital decisions feel safe and reversible.



01 — COLOR PALETTE

Color System

PayNora's color palette is built on semantic meaning 4 each color communicates a specific state or action, reducing the cognitive load on senior users. Blue was chosen as the primary color because research consistently shows it evokes trust, calm, and financial reliability. The semantic colors (green, red, orange) follow universal conventions, helping users instantly understand success, errors, and warnings without reading additional text.

Primary Blue	#4472E9
Primary Hover	#3B68E3
Primary Pressed	#1E3FA8
Neutral Dark	#111827
Gray	#6B7280
Light Gray	#F3F4F6
White	#FFFFFF
Success	#0F843E
Alert	#D64545
Warning	#AF7419

Blue builds trust and safety, while semantic guide user decisions and reduce errors. All color combinations meet WCAG AA contrast requirements for accessible design.

02 — TYPOGRAPHY

Typography System

PayNora uses the Inter font family 4 a highly legible, open-source typeface designed for screen interfaces. Its X-tall height, generous letter spacing, and clear character differentiation make it ideal for senior users who may have reduced visual acuity or are reading on smaller mobile screens. The system defines four distinct size tiers, each with a specific role in the visual hierarchy, ensuring users can always distinguish headings from body text and labels at a glance.

Aa Inter
Google Fonts

ABCDEFGHIJKLMNOPQRSTUVWXYZ

abcdefghijklmnopqrstuvwxyz

1234567890 !@#$%&*()+-=

Aa	Aa	Aa	Aa
Regular 400	Medium 500	Semi Bold 600	Bold 700

Heading 1	32px	The quick brown fox jumps over the lazy dog
Heading 2	24px	The quick brown fox jumps over the lazy dog
Title	20px	The quick brown fox jumps over the lazy dog
Body	16px	The quick brown fox jumps over the lazy dog
Label	14px	The quick brown fox jumps over the lazy dog
Caption	12px	The quick brown fox jumps over the lazy dog

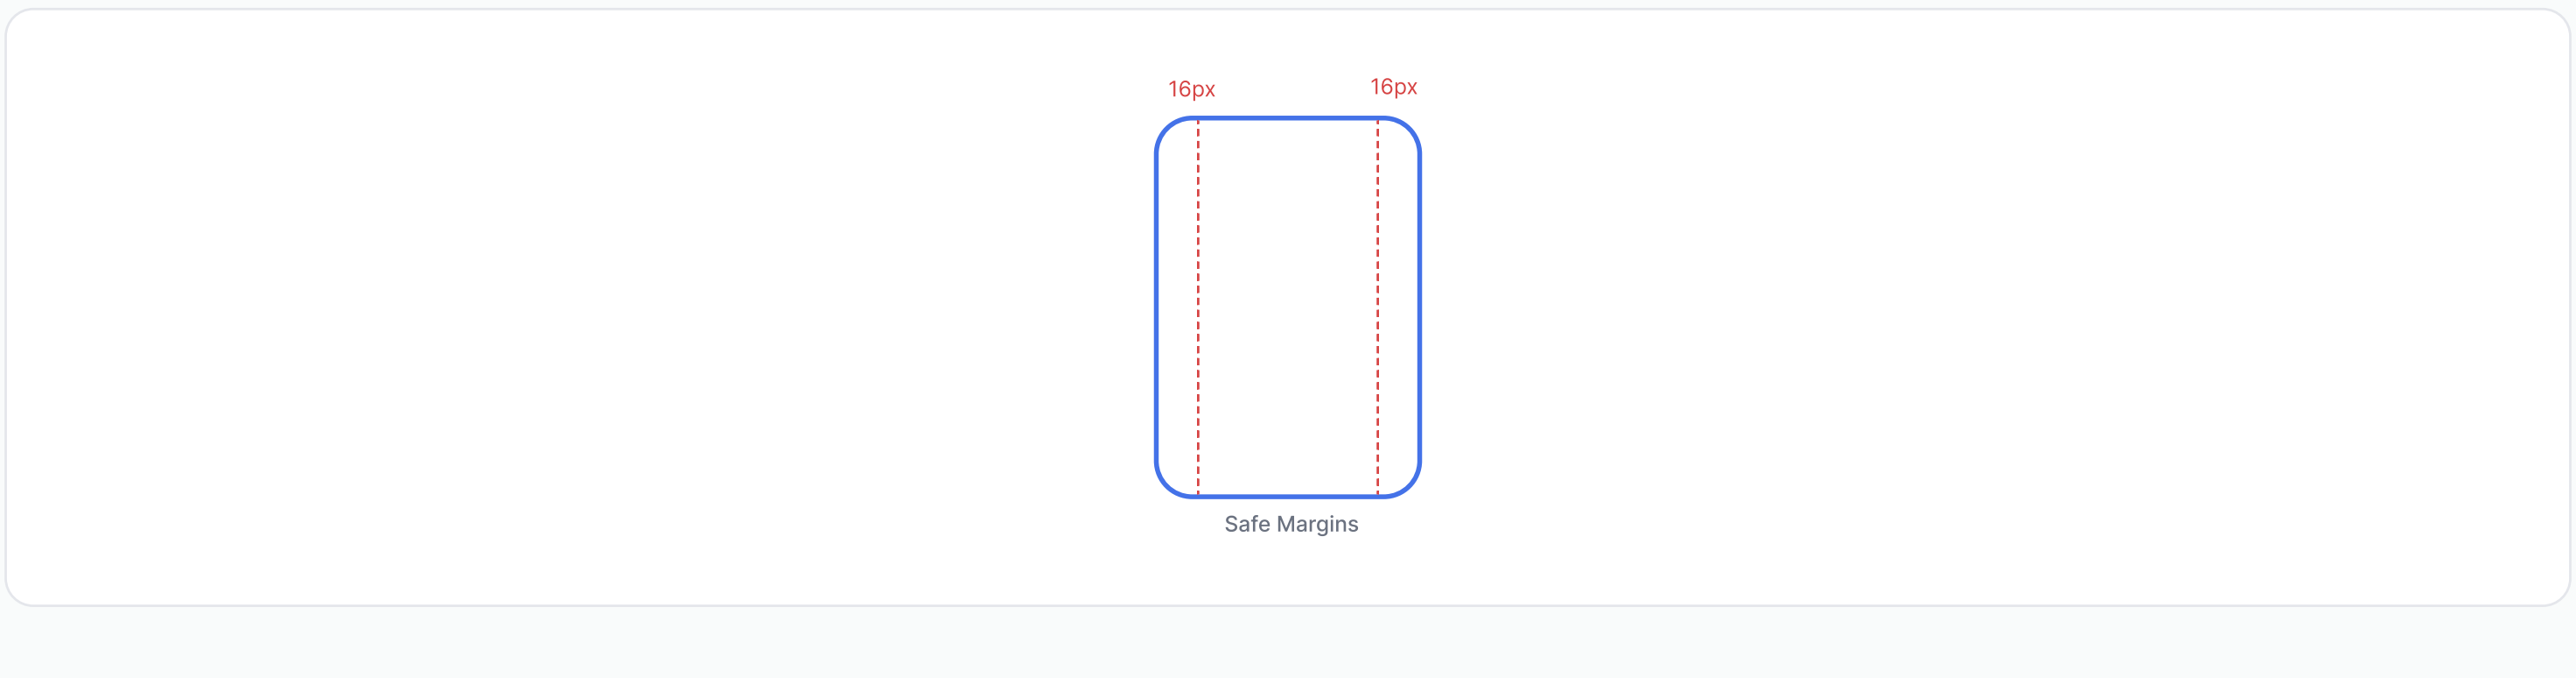
Optimized for senior readability with clear hierarchy and high legibility at all sizes.

03 — GRID SYSTEM

Spacing & Layout

PayNora follows an 8pt spacing system to maintain visual consistency, alignment, and predictable layouts across all screens. This grid helps create clear content hierarchy, balanced white space, and touch-friendly interactions for senior users. Consistent spacing improves readability, reduces cognitive load, and ensures every element is placed within comfortable thumb-reach zones.

8pt Spacing System



Built on an 8pt grid system to improve readability, maintain clear hierarchy, and ensure touch-friendly spacing for senior users across all screen sizes.

04 — COMPONENT SYSTEM

Components

PayNora's component library is reusable, scalable, and designed for consistency across all screens. Each component follows strict accessibility guidelines and has been tested with senior users to ensure intuitive interaction. The system reduces development overhead while maintaining a cohesive, trustworthy visual experience.

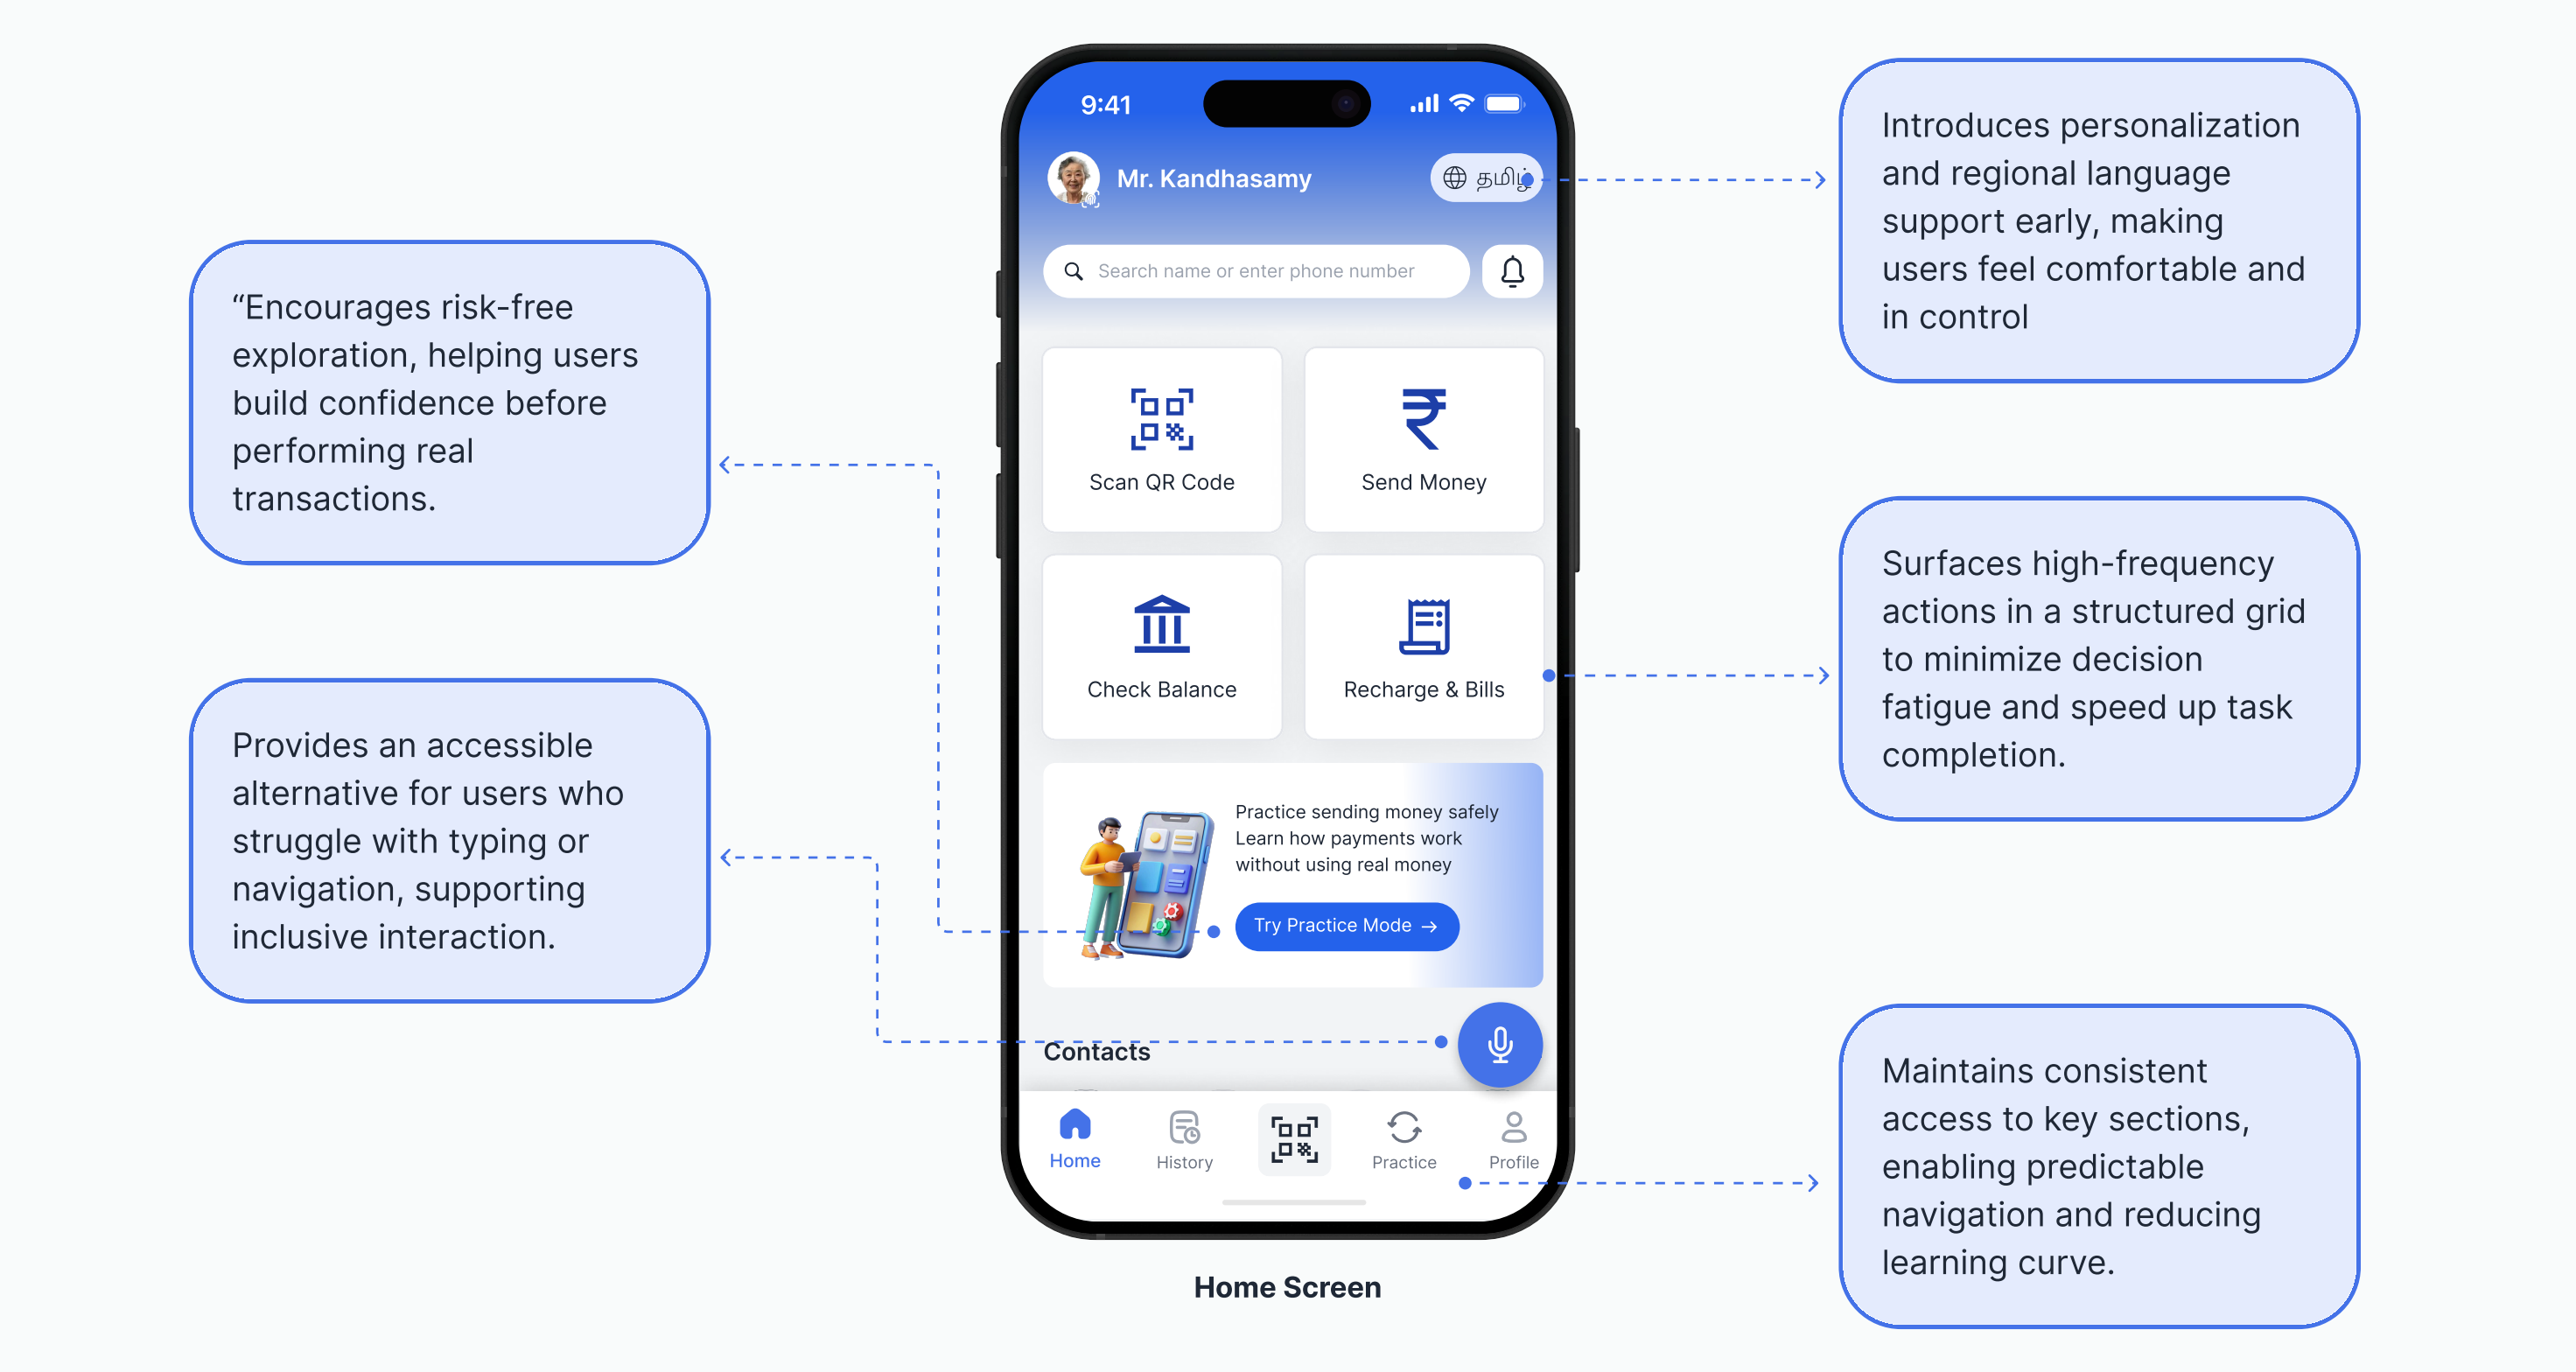
Each component is crafted to seamlessly integrate, ensuring a consistent and reliable experience that senior users find familiar and easy to navigate throughout the app.

05 — SCREEN RATIONALE

Design Decisions



"Encourages risk-free exploration, helping users build confidence before performing real transactions.

Provides an accessible alternative for users who struggle with typing or navigation, supporting inclusive interaction.

Introduces personalization and regional language support early, making users feel comfortable and in control

Surfaces high-frequency actions in a structured grid to minimize decision fatigue and speed up task completion.

Maintains consistent access to key sections, enabling predictable navigation and reducing learning curve.

Home Screen

Learn & Practice
Practice mode needs no real money.
Practice Sessions
Simulate to practice the digital payment
Start Practice
Safety & Learning
Video Tutorials
Watch tutorials to learn digital payments
Fraud Awareness
Spot scams before they steal your money
Mistake Scenarios
Learn to recover from common payment mistakes.

Highlights hands-on simulation as the primary learning method, encouraging learning by doing.

Positions advanced learning (error handling) after basic understanding to avoid overwhelming new users

Immediately reassures users that no real money is involved, addressing primary anxiety before interaction.

Supports passive learning for users who prefer guided, step-by-step explanations.

Proactively educates users about scams, increasing trust and reducing vulnerability.

Practice Screen

06 — ACCESSIBILITY & INCLUSIVE DESIGN

Inclusive Design

Accessibility is foundational to PayNora. Every interaction is intentionally designed to support senior users with low vision, reduced motor control, and limited digital familiarity, ensuring they can complete financial tasks independently and with confidence.

44px Touch Targets
Minimum tap area for all interactive elements, reducing accidental taps.

16px Readable Typography
Comfortable body text size that supports effortless reading for seniors without zooming.

4.5:1 Contrast Ratio
All text and interface elements meet WCAG AA contrast requirements.

Clear Action Labels
Buttons and links use simple, descriptive labels.

Large Touch Areas
Generous padding creates forgiving touch zones.

Confident & Independent

Every design decision empowers senior users to navigate digital payments with ease, confidence, and trust.

Human-centered design for digital confidence

With inclusive design at its core, every aspect of the app is tailored for ease of use, ensuring accessibility for seniors with visual impairments and varying levels of tech proficiency.

Helping senior users perform digital payments independently with confidence.

Purpose & Impact

This system was designed to reduce fear, prevent mistakes, and help senior users **perform digital payments independently with confidence.**

PayNora

Trust
Every interaction builds confidence through clear feedback and guided steps.

Clarity
Information hierarchy reduces cognitive load for senior users.

Safety
Reversible actions and practice mode eliminate fear of mistakes.
